Macroeconomics II: Behavioural Macro

Summer 2019

Prof. Dr. Klaus Wälde

Jean Roch Donsimoni (lecture) and Hoang Van Khieu (tutorials)

www.macro.economics.uni-mainz.de

January 21, 2019

Contents

1	Organizational matters	1.1
2	The idea of this lecture	2.0
2.1	Some background on behavioural macro	2.0
2.2	The structure of the lecture	2.1
I	Emotional Economics	3.0
3	Introduction	3.0
3.1	Questions asked in Part I	3.0
3.2	Some background from the psychological literature	3.3
3.3	Some background from the economic literature	3.8
3.4	Classification of emotions	3.10
4	Which role do emotions play in economic research?	4.0
4.1	Emotions in classical economics	4.1
4.2	Absence of emotions in Neoclassical decision making?	4.2
4.2.1	Preference-based approach	4.4
4.2.2	Choice-based approach	4.8

4.2.3	Emotions in neoclassical decision making or not?	4.12
4.3	Emotions in behavioural economics – the current view	4.15
4.3.1	Back to Bentham	4.16
4.3.2	Happiness literature	4.19
4.3.3	Experienced utility vs decision utility in theory	4.23
4.4	Exercises	4.25
4.4.1	Decision-making: preference- and choice-based approaches	4.25
4.4.2	Happiness and unemployment (Clark & Oswald, 1994)	4.26
5	How do economists model emotions?	5.0
5.1	Background: Expected utility maximization	5.0
5.2	Ex-post emotions	5.8
5.2.1	Loomes and Sugden (1982) – regret and rejoicing	5.9
5.2.2	Loomes and Sugden’s motivation	5.12
5.2.3	Loomes and Sugden (1986) – disappointment and elation	5.15
5.2.4	Gul (1991)	5.16
5.3	Ex-ante emotions - anxiety, worry and fear	5.18
5.3.1	The setup	5.18
5.3.2	Optimal behaviour and comparative statics	5.23
5.4	Immediate emotions	5.27
5.4.1	Hunger, thirst, pain, desire	5.27

- 5.4.2 Laibson (2001) - Cue theory of consumption 5.29
- 5.4.3 Stress (Wälde, 2015) 5.35
- 5.5 Belief-based emotions 5.45
 - 5.5.1 Psychological game theory 5.45
 - 5.5.2 Game theory: background and extensive form games 5.46
 - 5.5.3 Psychological game theory: the bravery game 5.47
 - 5.5.4 Guilt 5.57
- 5.6 Fairness and altruism 5.67
- 5.7 Exercises 5.68
 - 5.7.1 Regret theory (Loomes and Sugden, 1982) 5.68
 - 5.7.2 Anticipatory emotions and anxiety (Caplin and Leahy, 2001) 5.70
 - 5.7.3 Immediate emotions and state-dependent preferences 5.71
 - 5.7.4 Cue theory of consumption (Laibson, 2001) 5.72
 - 5.7.5 Stress (Wälde, 2016) 5.74
 - 5.7.6 Psychological Game Theory: the Bravery Game 5.74

6 Conclusion 6.0

II Behavioural economics 7.0

7	Overview	7.0
7.1	General idea	7.0
7.2	Specific papers in behavioural theory	7.1
7.3	What we do here at JGU	7.2
8	Bounded willpower and automatic behaviour	8.0
8.1	The plan	8.0
8.2	The model	8.2
8.3	Individual behaviour	8.4
8.4	Summary	8.8
8.5	Exercises	8.10
	8.5.1 Addiction and Automatic Processes (Bernheim and Rangel, 2004)	8.10
9	Time consistent and time inconsistent behaviour	9.0
9.1	Time consistency	9.0
	9.1.1 Two-period utility maximization under certainty	9.0
	9.1.2 Three-period utility maximization under uncertainty	9.1
	9.1.3 Where can we see that decision making is time consistent?	9.4
9.2	Time inconsistency	9.6
	9.2.1 Exponential/ geometric discounting	9.7
	9.2.2 Non-exponential discounting	9.9

9.2.3	Quasi-hyperbolic discounting	9.11
9.2.4	O'Donoghue and Rabin (1999)	9.14
9.3	Exercises	9.22
9.3.1	Three-period savings problem	9.22
9.3.2	Time (in)consistency (Laibson, 1997; O'Donoghue and Rabin, 1999) [MAT-LAB]	9.23
10	Conclusion	10.0
III	How behavioural macro could look like	11.0
11	The plan	11.0
12	Unemployment and time inconsistency	12.0
12.1	Models of unemployment	12.0
12.1.1	A reminder of voluntary unemployment	12.1
12.1.2	A reminder of involuntary unemployment	12.2
12.1.3	A reminder of matching models of unemployment	12.4
12.2	A pure search model of unemployment	12.7
12.2.1	The basic idea	12.8
12.2.2	Expected utility once employed	12.9

12.2.3	The optimal search strategy	12.18
12.2.4	The discounted expected utility (value function) of a job seeker	12.19
12.2.5	Reservation wage	12.20
12.2.6	Hazard rates and average duration in unemployment	12.21
12.3	Search unemployment and time inconsistency	12.23
12.3.1	Pure search in discrete time with time consistent behaviour	12.24
12.3.2	Pure search and time inconsistency	12.28
12.4	Conclusion	12.31
12.5	Exercises	12.33
12.5.1	Pure search model of unemployment	12.33
12.5.2	Pure search in discrete time and time consistent behaviour [MATLAB]	12.35

13 Growth, cues and automatic behaviour 13.0

13.1	Models of growth	13.1
13.1.1	The Solow model with technological progress and population growth	13.1
13.1.2	A simple model of endogenous growth: the AK model	13.10
13.1.3	Conclusion	13.21
13.2	Cues and automatic behaviour	13.25
13.2.1	Reminding of cues	13.26
13.2.2	Reminding of automatic behaviour	13.28
13.2.3	Linking the two	13.30

13.3 Exercises	13.32
13.3.1 Growth paths [MATLAB]	13.32
13.3.2 Optimal consumption paths	13.33
14 Business Cycles and Anxiety	14.0
14.1 Business cycles in an OLG model	14.0
14.1.1 The structure of a simple RBC model	14.1
14.1.2 Some references	14.1
14.1.3 Technology	14.2
14.1.4 Timing	14.4
14.1.5 Firms	14.5
14.1.6 Households and intertemporal optimization	14.6
14.1.7 Aggregation over individuals and firms	14.9
14.1.8 The dynamics of TFP, the capital stock and output	14.11
14.1.9 What have we learned?	14.13
14.2 Business cycles and anxiety: towards a complete analysis	14.15
14.2.1 The effect of anxiety	14.15
14.2.2 Aggregation over individuals and firms	14.16
14.2.3 How anxiety affects the distribution of wealth	14.18
14.3 Exercises	14.22
14.3.1 Business cycles [MATLAB]	14.22

IV	Wealth distributions and redistribution	15.0
15	Origins of wealth distributions	15.0
15.1	Some facts	15.0
15.2	Determinants of wealth distributions	15.2
16	A simple model	16.0
16.1	The setup	16.0
16.2	Equilibrium	16.3
16.3	The distribution of wealth	16.6
16.4	The mean and variance of the wealth distribution	16.9
16.5	What do we learn from this?	16.15
17	Conclusion	17.0
V	Summary	18.0
18	General idea of the lecture	18.0
19	Big messages	19.0
